SUMMARY

Software Developer with a focus on applied ML and full-stack systems-trained PyTorch models, LLM-backed FastAPI services, and production-grade web applications. Built end-to-end products across AgriTech, computer vision, and enterprise asset management, prioritizing measurable evaluation and reliable deployments.

EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science (AI & ML)
GPA: 8.69/10.0

Bhopal, India
2023 – 2027

TECHNICAL SKILLS

Languages: Python, C++ , JavaScript, SQL

Machine Learning: PyTorch, Scikit-learn, LightGBM, LLMs, RAG, Prompt Engineering, Agentic AI, Google Gemini API

Frameworks & Libraries: FastAPI, Flask, React, Vite, Pandas, NumPy, OpenCV, TanStack Query

Developer Tools: Git, GitHub, VS Code, Postman, Docker, Vercel, Render, WebSockets, REST APIs

EXPERIENCE

Intellinex Technology

Software Engineer · Internship

Noida, Uttar Pradesh, India
Jul 2026 – Oct 2026

- Built a multi-tenant asset management platform with a three-tier RBAC system, barcode-based intake, and PostgreSQL-backed inventory tracking, deployed to production on cloud infrastructure.
- Added an LLM-based classification step to the intake pipeline that auto-tags hardware by category, location, and depreciation tier, replacing manual tagging for most incoming assets.
- Developed role-scoped FastAPI endpoints with audit-trail logging, versioned database migrations, and Docker-based deployment for the platform's backend.

PROJECTS

Krishi Khata — Digital Farm Ledger & Market Intelligence

[Website](#) | [GitHub](#) Aug 2025 – May 2026

Full-Stack Developer | FastAPI, React, Vite, PostgreSQL, Gemini AI, WebSockets

- Delivered a full-stack AgriTech PWA, orchestrating a 12-hour background worker pipeline to ingest data.gov.in commodity metrics into PostgreSQL, layered with a 1-hour in-memory TTLCache to guarantee **sub-200ms** market lookups.
- Engineered an i18n-aware bilingual (Hindi/English) AI advisory layer on Google Gemini, building custom CropDataCache and TranslationCache pipelines to serve localized responses without **redundant LLM API calls**.
- Architected a secure WebSocket chat gateway with JWT authentication and enforced strict, endpoint-specific SlowAPI rate limiting (**5–20 req/min**) to successfully mitigate abuse across Auth and AI inference routes.

PixelShamer — Image Quality & Defect Detection

[Website](#) | [GitHub](#) Jan 2026 – Aug 2026

ML & Backend Engineer | IIITH Internship Assessment | PyTorch, FastAPI, React, PostgreSQL, Docker

- Designed a hybrid pipeline combining a Multi-Head MLP (22 hand-crafted CV signal metrics) with a Convolutional Autoencoder for unsupervised defect localization, reaching **94.8% macro ROC-AUC** across 6 degradation classes on 150 unseen images at **<40ms** CPU inference.
- Implemented power-exponential defect gating and a 101-point PCHIP monotonic calibrator to eliminate score clustering and cut false positives by **38.8%**, without degrading classification accuracy.
- Deployed a FastAPI service with PostgreSQL persistence and Docker containerization alongside a three-viewpoint React inspection workbench, with a **10/10 passing** automated test suite.

CERTIFICATIONS

Applied Machine Learning in Python — University of Michigan (Coursera)

Dec 2024

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional

Mar 2025

Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate

Feb 2025
